Website Wireframes (Low-Fidelity)

Structural wireframes for a web application. These show layout, content hierarchy, and user paths only. Colors, typography, and imagery are intentionally excluded.

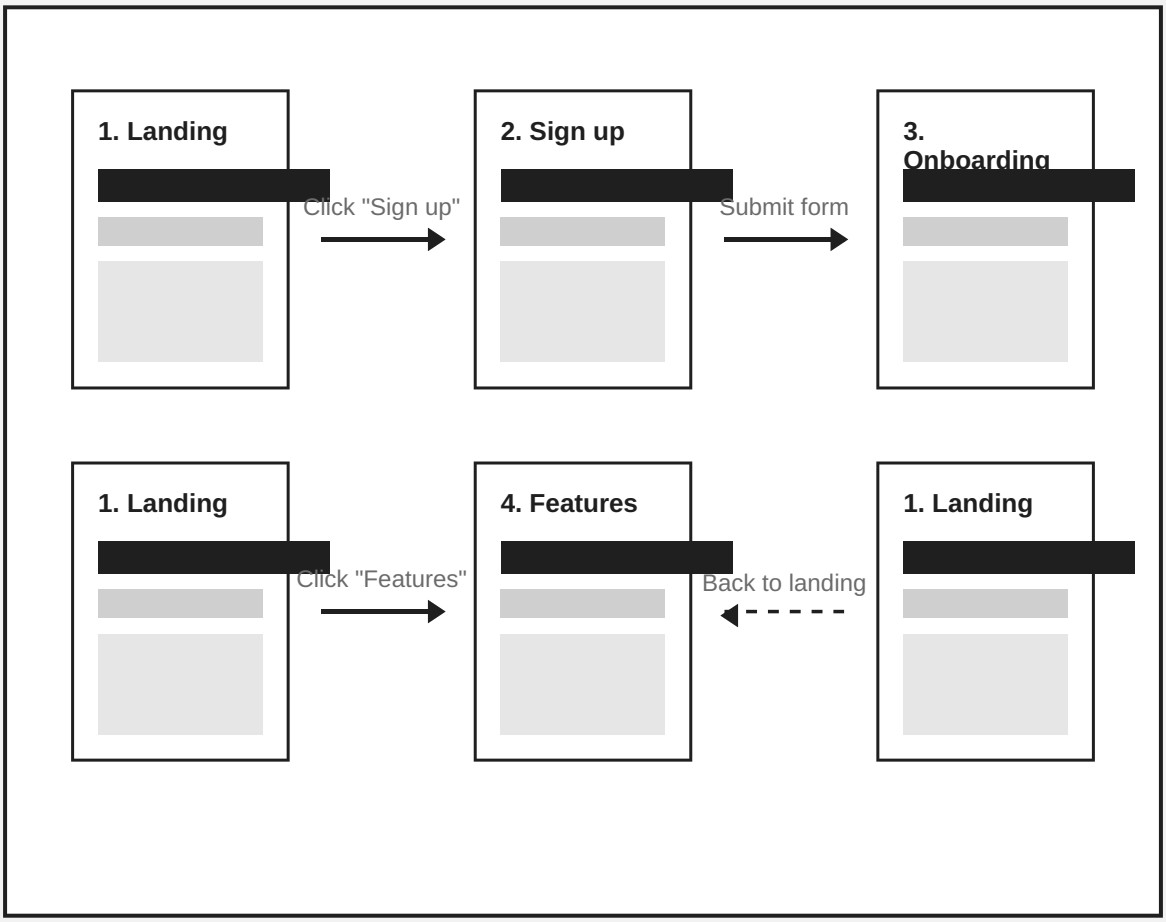
USER PATHS BETWEEN SCREENS



Structure notes. Navigation has five items, the hero carries one primary and one secondary action, and feature cards use one repeated pattern (icon, title, short description). Social proof sits above the footer so visitors see evidence before the final navigation. Each flow path starts and ends on a screen already shown above, so the diagram can be read as a closed loop.
